FARM PRODUCTION, FARM DISPOSITION, AND VALUE OF PRINCIPAL CROPS 1/
1945-46

This is one in a series of annual reports relating to farm disposition of crops, live-stock, and livestock products. This report includes estimates of grains, hay, seeds, potatoes, fruits and nuts, and some other commodities. Estimates for cotton and cottonseed were published with the April 25 cotton report; those for tobacco, sugar beets and sugarcane for sugar are published in the General Crop Report released on May 9. The reports on chickens and eggs and turkeys were published in March, milk, and meat animals in April.

The production estimates for 1945 and 1946 shown in this report are the same as published in the December 1946 Annual Summary of Crop Production, except for citrus fruits. Estimates of farm disposition relate to portions of the crop used or to be used for the designated purposes and do not include purchases by farmers from others for such purposes. Portions of crops shown as fed to livestock represent quantities fed on the farms that produced the crop in the given year and do not represent total quantities of crops ultimately used for livestock feeding. Farmers feed considerable quantities of certain crops on the farms where the crop is grown and they report their sales, actual or expected, regardless of the final use that may be made of the quantities sold. For the principal feed crops, the grain used for feed and seed is a residual (production less household use and sales) and does not include grain purchased for such purposes. Some products shown as "sold" from farms may later be used for feed or seed on other farms in the same State or other States.

For some crops such as wheat, rye and peanuts, total seed requirements are shown as well as the amount of such seed which is home grown; i. e., used on farms where actually produced. The difference between total seed requirements and the amount used for seed on farms where grown is included in "sales" made by other farmers, in the same State or other States.

The season average prices for 1945 crops are, in most cases, the estimated mid-month prices (published currently in "Agricultural Prices") weighted by the estimated quantities sold in each month of the crop marketing season. The marketing season is shown below the tables for each crop. Prices for the 1946 crops are based on mid-month prices for the months from the beginning of the crop marketing season through March 1947. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, many of the fruit and nut crops and most of the grass and cover crop seeds, are based primarily on special surveys. For some crops, such as sugarcane sirup (except Louisiana), sorghum sirup and velvetbeans, prices are season average prices as reported December 1 of each year.

The value of sales and value of home consumption for each crop represents the designated quantity used for each purpose multiplied by the season average price per unit of measure. In like manner, the value of production is obtained by applying the season average price of the portion sold to total production, or production having value, as the case may be. These value estimates should not be confused with cash income which relates to the calendar year, irrespective of the year of production. The 1945 value estimates for wheat and corn do not include an allowance for the bonus of 30 cents per bushel for quantities delivered under the certificate plan announced by the Secretary. This plan became effective on April 22, 1946 and officially ended May 11, 1946 for corn and May 25, 1946 for wheat.

The estimates of farm disposition of crops are based upon data collected from many sources. Wherever possible sales have been checked by enumerations, such as reports of processors, or by records of handlings, such as shipments by truck, railroads, and steamships. Many items of farm use are estimated from returns for individual farms from special disposition inquiries relating to individual crops. In these inquiries farmers are asked to report the quantities of the crops produced and the quantities used on the farm for each purpose. For some crops, sales are estimated directly by asking farmers to report quantities produced and quantities sold and to be sold.

1/ The estimates for grains, hay, peanuts, maple products, sugarcane and sorgo sirup were prepared by J. A. Ewing, J. H. Peters, Anna P. Kelly, R. F. Gurtz, H. R. Walker, C. G. Carpenter, G. C. Edler, T. J. Kuzelka, J. A. Hicks, J. F. Marsh, and J. C. Scholl, under the general direction of C. E. Burkhead, Head, Division of Field Crop Statistics; potatoes, fruits and nuts by Irvin Holmes, G. B. Strong, C. O. Parker, C. D. Palmer, E. O. Schlotzhamer, and P. F. Kiesler under the general direction of Reginald Royston, Head, Division of Fruit and Vegetable Statistics. Season average prices were prepared by G. D. Harrell, D. D. Pittman, R. E. Johnson, and Marjorie Miller, under the general direction of B. R. Stauber, Head, Division of Agricultural Price Statistics. Most of the basic data were gathered by the Agricultural Statisticians in Charge of field offices.

WHEAT: PRODUCTION, FARM DISPOSITION, AND VALUE, BY STATES, 1945 CROP

The crop marketing season is June 1 to May 31 for Kansas, North Carolina, South Carolina, Georgia, Tennessee, Alabama, Mississippi, Arkansas, Oklahoma, Texas, New Mexico, Arizona, and California; July 1 to June 30 for all other States. The values shown are for the marketing season or crop year and should not be confused with calendar year income.

The crop marketing season is September 1 to August 31. The values shown are for the marketing season or crop year and should not be confused with calendar year income.

1/ The difference between total seed and seed saved on farms where grown represents potatoes purchased for seed and is duplicated under "sold."

2/ Consists of potatoes sold for food, seed, processing, and all purchases by the Government under support programs.

3/ Revised.

Note: The beginning of the crop-marketing season varies between States from December 1 preceding the year shown for Florida and Texas to August 1 of the year shown for certain Northern States. The marketing season comprises 12 months in all States except California, which has a 14-month season beginning April 1 of the year shown.
